

MongoDB – Delete Document

In MongoDB, deleting a document can be done through below provided methods.

Syntax:

```
db.collection.deleteOne() --> New in version 3.2.
```

This command will delete a single document even though the filter or conditions have multiple documents that may match to update.

```
db.collection.deleteMany() --> New in version 3.2.
```

This command will delete all documents that match the condition.

```
db.collection.remove()
```

This command can delete either a single document or multiple documents that match the condition. Example:

```
db.students.remove(  
  { "firstname": "Manju" }  
)
```
