

## MongoDB – Update Document

---

In MongoDB, updating a document can be done through below provided methods.

### Syntax:

```
db.collection.updateOne() ---> New command in version 3.2.
```

This command will update a single document even though the filter or conditions have multiple documents that may match to update.

```
db.collection.updateMany() ---> New command in version 3.2.
```

This command will update all documents that match the condition.

```
db.collection.replaceOne() ---> New command in version 3.2.
```

This command will replace a single document that matches the condition.

```
db.collection.update()
```

This command can update either a single document or multiple documents that match the condition. Example:

```
db.students.update(  
  { "firstname": "Manju" },  
  {  
    $set: { "city": "delhi"},  
    $currentDate: { lastModified: true }  
  }  
)
```
